IPCELERATE™

Record calls automatically or on-demand... ...at a desk or on-the-go

What is IPstudio™?

IPstudio™ is the complete solution for recording and storing important phone calls in a unified communications environment. Low or high volume, automatic or on-demand, in the office or on the road, IPstudio™ manages the process with ease and simplicity.

Use IPstudio™ to record a few select calls or hundreds of calls. Record calls automatically based on the time of day, a designated group of phones, by extension or even when a specific phone number is dialed.

Touch an icon on an IP phone, and record calls—back to the beginning of the call—as needed. Important client calls. Medical reviews. Legal discussions. Threatening calls. Conference calls. Capture each call in its entirety, no matter when during the call the record function is initiated.

With IPstudio™ call recording can be done from an IP phone or an iPhone™, all supported by seamless data storage and retrieval.

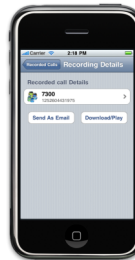

From small businesses or individual departments to large enterprise corporations, companies of all sizes have identified call recording as an important business need. . . IPstudio™ is the essential tool to address this need.

IP phone-based IPstudio™ requires IPsession™ 5.4 or above. The iPhone™ application requires IPsession™ 5.4 or above and IPcelerate Webur™ 1.6. iPhone™ is a registered trademark of Apple, Inc.

What Can IPstudio™ do for you?

A fund investor is listening to a quarterly earnings call when he is asked to join an important meeting. With the touch of an icon on his IP phone, the investor records the earning call, back to the beginning, so he can listen to it in its entirety later in the day.

A large corporation with over 2,000 employees automatically records every 911 call made from one of their IP phones.

A sales manager working from home initiates a weekly sales conference call from her iPhone™, records that call with the touch of an icon on the phone, and then sends the recorded call to her supervisor, who is traveling and not available for the call.

A university opens a peer advisor department staffed with senior and graduate psychology students. Phone lines are open each evening between 6pm –midnight, and all incoming calls are automatically recorded, and stored, during this time period.

A small insurance office uses on-demand call recording for all phone discussions in which policy or rate changes are approved by a customer, as this allows them to document the conversation in the event of a future billing dispute.
